Proximity chip sticker, 5pcs. Set Terxon SX

Art.-Nr. AZ5502

• Proximity arming and disarming of the Terxon alarm system without entering a code on the control panel
• Self-adhesive, unobtrusive proximity chip sticker for mobile phone, wallet etc.
• Simply hold it in front of the control panel
• Simple installation and configuration on the Terxon alarm control panel

Simple, practical and convenient
As an optional accessory for the Terxon alarm system, the proximity chip sticker allows proximity arming and disarming of the alarm system via the control panel. Simply hold the chip sticker in front of the control panel. The sticker should be stuck to a suitable item that the user carries around every day.

Simple identification without a code
No PIN code is required for identification. Users simply hold the item carrying the chip sticker in front of the control panel to verify their authorisation.

Programming and important information
The chip sticker is programmed directly at the alarm control panel, where the user authorisations are also configured. The sticker is powered by the RF field of the receiver – which means no batteries are required. To prevent impairment of the function of the chip sticker, it should not be stuck to metallically shielded items or exposed to moisture or temperatures above 50°C. The sticker must not be bent or exposed to magnetic fields.
