

Camera Universal Wireless Transmitter 2.4 GHz

Art.-Nr. TV5722

- For use indoors and outdoors (in the wireless outdoor housing)
- Transmission of video signals on 2.4 GHz
- Wide range, up to 500 meters

The universal wireless transmitter is attached directly to the camera and transmits its recorded video signal to a wireless receiver that is, for example, connected to a monitor. Wireless signal transmission is advantageous in places where the installation of cables is not possible or too expensive. The universal wireless transmitter operates in the high-frequency 2.4 GHz band. The transmission power is 10 mW. The range indoors is up to 45 meters, outdoors up to 500 meters. At 2.4 GHz, 5 transmission channels are available: 2.4145, 2.4285, 2.4425, 2.4565 and 2.4705 GHz. A maximum of 3 channels can be utilized simultaneously within an object without interference. The universal wireless transmitter can be easily installed on all cameras of the ABUS Security-Center portfolio. This way, you convert any conventional camera into a wireless camera with a few moves. The universal wireless transmitter is also perfect for use in the wireless outdoor housing (TV5730).

Technical Data

| | |
|----------------------------|------|
| DC voltage supply | 12V |
| Height | 37mm |
| IP protection class | 30 |
| Length | 45mm |
| Max. operating temperature | 55°C |

| | |
|----------------------------|-------|
| Min. operating temperature | -10°C |
| Net weight | 0.9kg |
| Power consumption | 70mA |
| Transmission channels | 5 |
| Width | 65mm |
