- Recording triggered by motion detection, schedule or permanent
- 2 USB interfaces for quick and simple storing of important recordings
- Detailed high-resolution analogue recording in real time
- Mobile access using the ABUS iDVR app

Full kit for professional video surveillance

This video surveillance kit contains everything you need for professional outdoor surveillance, day or night, with 4 cameras. It includes a compact digital recorder with a built-in 500 GB hard drive, H.264 compression and VGA output, as well as 4 IR day/night outdoor cameras with plug-and-play accessories (4 x combined cables, router power supply unit, mouse).

State-of-the-art recording technology – intuitive operation

The compact DVR provides four channels for recording at up to 25 images/sec (real time) and five different resolutions (max. 960 x 480 pixels). Using H.264 compression, the video images are stored in excellent quality, take up very little memory on the hard drive and are optimised for fast network access. Depending on the setting, recording is started manually, according to a schedule, or through motion detection. Operation is very easy and self-explanatory.

Simple mounting indoors or outdoors

The kit includes 4 IR cameras with 600 TV lines and a 3.6 mm fixed lens (angle of view: 68°) with integrated IR LEDs for day/night operation outdoors (IP66). The router power supply unit and 20 m combination cable supplied
